

TD N° 1/ GENERAL KNOWLEDGE ON THE BUSINESSPART
2: PERSONNEL MANAGEMENT

The "personnel management" information system is certainly the one most often automated: for many companies, using a computer means primarily "processing payroll." This task is easily automatable because:

- The calculation rules have been established for a long time
- The frequency is low (once a month)
- The volume of information is not too large
- The response time is not very short (2 to 3 days)
